## Interlocking Record Shelf System OWNER'S MANUAL

---

### Includes:

- 8 Screws
- 4 Plugs
- 2 Right Angle Planks
- 2 Flat Planks
- 2 Square End Pieces (13-3/4"x14-1/2")

### ASSEMBLY INSTRUCTIONS

- 1) Lay one of the right angle plank assemblies on a flat surface so that pre-drilled holes are on the side that is vertical and the shorter portion is horizontal.
- 2) Take one 13-3/4"x14-1/2" end piece and place it vertically against the right angle plank so that the pre-drilled holes match up. The protruding, shorter planks on the end piece should be horizontal and face the inside of the right angle plank. Place the other square end piece on the opposite side of the angled plank, once again making sure the pre-drilled holes are matched.
- 3) Using a Philipps screwdriver (or a 1/2" square driver), place one screw into the pre-drilled hole and turn until snug. Do the same for the other end.
- 4) Rotate the rack 180° so that the side that was just assembled is facing away from you. Fit the second right angle plank to the bottom of the square end pieces so that it interlocks and the pre-drilled holes are once again matched up.
- 5) Repeat step 3.
- 6) Place the rack so that both right angle planks are at the back and lay one of the two flat planks on top of the left and right vertical end piece posts that are nearest to you. Pre-drilled holes should be matched up.

# Mapleshade

- 7) Repeat step 3.
- 8) Turn the rack upside down and lay the last remaining flat plank on top of the two square end piece posts making sure to match the pre-drilled holes.
- 9) Repeat step 3.
- 10) Plugs can be inserted into the four pre-drilled holes on the top of the shelf so that an additional shelf can be put on top and lock into place.

## Specifications:

- Each shelf holds up to 150 LPs
- Interlocking construction allows stacking up to six shelves high
- Internal dimensions: 24" wide x 13" deep x 13" tall
- External dimensions: 27" wide x 13-3/4" deep x 14-1/2" tall
- Stored LPs have all their spines clearly visible
